

BUSINESS SOLUTIONS
WASTE NO MORE

ECOLIBRIUM™
A WSN SOLUTION

How Ecolibrium™ can help improve the environment – and your bottom line

Do you want your business to operate more sustainably?

It's an increasingly important goal for many companies, but developing low-cost, environmentally sound and "no-fuss" waste management processes can be really daunting.

Why not let us do the work for you, with WSN's Ecolibrium™ Business Solutions?

LISTENING TO YOUR NEEDS

WHY CHOOSE WSN AND AN ECOLIBRIUM™ BUSINESS SOLUTION?

WSN is both a pioneer and a dependable, proven performer in waste, recycling and resource recovery solutions.

Our Ecolibrium™ Business Solutions provide a one-stop shop, ready to go, and with a "can-do" attitude. But behind all this is over 30 years solid experience serving the greater Sydney area, and our track record of reliability and responsibility.

Our team has extensive skills and hands-on experience in all areas of waste management including collections, recycling, alternative waste technologies, and planning and delivering easy, reliable and cost-effective solutions for business.

And our network of 12 sites is convenient, flexible and available to serve your needs 365 days a year.

We have the infrastructure and the know-how to help you develop a healthy triple bottom line – and that's good news for you and your business.

SOLUTIONS CUSTOMISED UNIQUELY FOR YOUR BUSINESS

We believe there's no "one size fits all" waste management solution. Instead we take a total systems approach, asking how your business operates, what services are already in place, and what you require, then tailoring a solution to address your unique needs. Our services include:

Advice and planning

- auditing your system, including environmental and safety auditing
- analysis and planning
- advice on developing systems, policies and standard operating procedures

Implementation of new equipment, systems and services

- source separation and resource recovery
- colour coded signage and bins
- collection
- recycling
- processing
- disposal
- cleansing services

Support services

- on-site staff education and training
- tailored sustainability reporting

COLOUR-CODED BINS

WE PROVIDE ONSITE EDUCATION AND TRAINING

Sorting waste for recycling rather than sending it to landfill can save around 50% in disposal costs.

Leading facilities for maximum resource recovery

Ecolibrium™ Business Solutions are unique in providing access to the state of the art processes at the Eastern Creek AWT facility and, soon, the Ecolibrium™ Mixed Waste Facility at Narellan.

Eastern Creek Alternative Waste Technology (AWT) Facility

This facility transforms mixed waste into valuable resources. It is designed to deliver a range of impressive benefits including:

- Diverting up to 80% of waste from landfill.
- Producing up to 23,500 tonnes of compost each year.
- Capturing up to 100% of biogas produced.
- Reducing greenhouse gas emissions – equivalent to taking up to 50,000 cars off the road.
- Recovering up to 23,000 tonnes of recyclable materials per year.
- Producing enough green electricity to power up to 2,250 homes.

Best practice recycling

Our Materials Recycling Facilities at Chullora and Narellan are designed for maximum recovery of recyclable materials such as glass, plastics, aluminium and steel cans, paper and cardboard.

PROFITABLE PARTNERSHIPS

Responsible businesses that are using our solutions are in industries such as:

- Healthcare
- Manufacturing
- Public utilities
- Hospitality
- Exhibitions and entertainment

WE PROVIDE ADVICE AND PLANNING IMPLEMENTATION OF EQUIPMENT, SYSTEMS AND SERVICES AND SUPPORT PROGRAMS

A simple case for good business...

Over the next four years, the waste levy payable to the Department of Environment and Conservation for each tonne of waste sent to landfill is set to rise by around \$31 per tonne. This means that other recovery and processing options will become comparatively cheaper in the medium term.

The demand for these alternative waste technology (AWT) facilities is growing fast, as businesses look to more cost-effective and environmentally sustainable environmental outcomes. Because current AWT processing capacity is limited, it is definitely worth considering entering into a medium to long-term agreement now, to secure space. And we're in a unique position to provide access to some of these facilities.

We can also help save you money in other ways, by working with you to increase bin weights, minimising the number of bin lifts, and reducing your overall collection costs. With tailored sustainability reporting you can evaluate your waste management program and identify areas for improvement and further cost savings.
